Skills

- **Languages & Technologies:** Java, JavaScript, Python, SQL (PostgreSQL), Node.js, React/Redux, MongoDB
- **Tools & Frameworks:** Playwright, Jest, Docker, Git, GitHub Actions, JMeter
- **Concepts:** REST APIs, Data Structures, ETL Pipelines, CI/CD, Agile/Scrum, JSON

Experience

Jr. Software Engineer, OrderGrid

Sept 2023 – April 2026

- Designed and developed a scalable Playwright-based automation framework for end-to-end testing, improving execution time by 50% and reducing test flakiness by 90%
- Built a Jest-based API testing framework to validate RESTful services and ensure reliability of backend endpoints
- Developed and executed JMeter load testing scripts to simulate high-traffic scenarios and identify system performance bottlenecks
- Implemented CI/CD pipelines using GitHub Actions to automate regression testing and streamline deployment workflows
- Created reporting dashboards using GitHub Pages to visualize test results and system performance metrics

Application Developer Co-op, CIBC

Jan 2020 – Aug 2020

- Developed an Angular-based internal tool to streamline deployment workflows for engineering teams
- Diagnosed and resolved memory leaks in a production system, collaborating with engineers to implement fixes and improve performance
- Built and optimized UI components using Pega and CSS, enhancing usability and application efficiency
- Achieved Pega System Architect Certification through hands-on project work

Application Developer Co-op, Faculty of Arts & Science Uoft

Jan 2018 – Aug 2018

- Designed and implemented ETL pipelines to ingest and transform large-scale *Statistics Canada CANSIM datasets*, handling structured data updates and schema changes for downstream applications
- Wrote Python, Perl, and SQL scripts to clean, process, and integrate data into PostgreSQL databases
- Built and maintained data processing workflows to parse Apache server logs, aggregate usage metrics, and load analytics data into databases for reporting and trend analysis
- Conducted system testing and identified critical defects across multiple web applications
- Collaborated with stakeholders to support data services and resolve technical issues

Projects

Catan Data Tracker

2022

- Designed and developed a modern, responsive MERN stack web application to track and analyze personal Catan game data, enabling visualization of gameplay trends
- Configured and deployed the application on a personal server using Nginx and PM2 for process management and uptime reliability
- Implemented user authentication to support secure access for multiple users, including friends and family

Education

University of Toronto - UTSC

June 2022

Honours Bachelor of Science

Computer Science Specialist Co-op, Software Engineering
